

What Not to Do on a VPS?

- don't do anything illegal on your VPS, or you will be expelled
- we don't like seeing Tor, exit nodes are forbidden
- if your VPS becomes the target of a DDoS attack more than twice, you can be expelled
 - this primarily concerns game servers, we basically haven't recorded problems anywhere else
- in essence, we don't mind game servers but we have had a number of bad experiences with them
 - special conditions apply to game servers, see the information about [assigning processor cores](#)

Other than that, the way you use your VPS is up to you and is not subject to any regulations.
